Assignment - Create Controllers and Entities

Assignment - Create Controllers and Entities

- Previously we took a ERD Image and used Junie to create instructions for JPA Entities
- We want to use Junie to implement the JPA Entities
- We are going to expand the scope to include adding repositories, services, controllers and tests
 - Junie is more than capable of completing this in one shot

Assignment - Create Controllers and Entities

- Your Tasks:
 - Update the requirements-draft.md to include instructions for the creation of repositories, services, dtos, mappers, controllers and tests. Use language to instruct it to implement CRUD operations
 - Use Junie to refine the requirements
 - Use Junie to create an implementation plan
 - Use Junie to create a task list
 - Have Junie write the code
